REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the claim limitations of "...a threading element is mounted forwardly of the counter-surface adjacent the cutting element and directly above and in near contact with the conveyor belt transport element in a horizontal transport plant of the meat, said threading element being bent laterally from the counter-surface in the horizontal transport plane at a horizontal angle with respect to the counter-surface whereby an outer end of the threading element extends at least partially across and in said horizontal transport plane to at least partially lift one side of the meat prior to the meat reaching said counter-surface..." in claim 1 and the claim limitations of "...the meat is threaded by a threading element mounted forwardly of the counter-surface adjacent the cutting element and directly above and in near contact with the conveyor belt transport element in a horizontal transport plane of the meat, the threading element being bent laterally from the counter-surface in the horizontal transport plane at a horizontal angle with respect to the counter-surface whereby an outer end of the threading element extends at least partially across and in the horizontal transport plane, before running up against the counter-surface, wherein the meat is at least partially lifted by the threading element from one side thereof and then guided on to the counter-surface..." in claim 10 are all not found in combination in the prior art of record. The Markert reference US 2003/0114097 does not disclose the threading element bent laterally from the counter at a horizontal angle in the horizontal transport plane. The Bakker reference US 6231436 does not disclose the threading element is adjacent the cutting element and is in near contact with the conveyor belt. The WIPO reference WO 03/037090 (supplied by applicant) does not disclose

the threading element is forward of the counter surface in the transport plane and does not disclose the threading element is bent laterally from the counter surface at a horizontal angle in the horizontal transport plane. Further, it would not have been obvious to combine these references in that they each have different orientations of conveyors, cutting elements and counters and threading elements and combining these references would result in counter surfaces and threading elements that cannot function with their associated cutting elements and thus create an inoperable device not capable of performing the intended use of the device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
